

OBLO Living Announces Z-Wave Plus Certification for DOC400 Gateway at ISE 2017

Novi Sad, Serbia – February 7, 2017 – OBLO Living, a company specialized in home automation solutions, is pleased to announce Z-Wave Plus certification of its DOC400 gateway. The DOC400 gateway may now be used with over 1,700 interoperable Z-Wave products available on the market today, including switches, temperature sensors, electronic shutters, and many other devices.

Having passed rigorous tests, the DOC400 gateway is able to control and interoperate with all Z-Wave devices from Z-Wave Alliance members. Z-Wave Plus, fully backward compatible with existing Z-Wave products, improves the original specification by enhancing the end user experience and making Z-Wave systems even faster and easier to install and set up. Incorporating the latest advancements of the technology, the DOC400 gateway offers tremendous benefits in terms of increased range, extended battery life, more bandwidth, and improved self-healing.

Built around embedded technologies (Linux, C/C++), the gateway's software enables the gateway to be used equally well both in cloud and edge-computing, applying control scenarios while being agnostic of the communication protocol. **OBLO Living compounds the DOC400 gateway with OBLO client applications (available at the Apple and Google Play stores), and OBLO cloud service, to offer a turnkey platform that covers lighting, security, safety, energy management and other aspects of the fast-growing home automation markets.**

The DOC400 gateway will be presented at ISE 2017 in Amsterdam, in the Z-Wave Alliance Pavilion, Booth 9-D160. Should you like to meet our representatives at the show, just drop us an email at sales@obloliving.com, or reach us at +381 628880200 during the show.
